

## Science

- The 5-year-old student has learned about the life cycle of frogs, including the stages of egg, tadpole, and adult frog.
- Through watching David Attenborough's documentary on frogs, the student has gained knowledge about the diverse habitats where frogs can be found around the world.
- The activity has also introduced the concept of adaptation, as the student observed how different types of frogs have unique characteristics that help them survive in their environments.
- By engaging with the visuals and explanations in the documentary, the student has started to understand the interconnectedness of ecosystems and how frogs contribute to the balance of nature.

After the activity, encourage the student to create their own frog habitat in a jar, including water, plants, and possibly a small toy frog for observation and imaginative play. Additionally, reading picture books about frogs and their habitats can further enhance the child's understanding of these fascinating creatures.

## Book Recommendations

- [Frogs](#) by David Badger: A beautifully illustrated book introducing young readers to the world of frogs and their diverse habitats.
- [Dave and Andi in the Frogs' World](#) by Lily Burgess: A delightful story that follows two children as they explore a pond and discover the amazing life of frogs.
