

Math

- The student has grasped the concept of skip counting by 5s, understanding the pattern and sequence of numbers on the number grid.
- Through this activity, the student has developed their ability to recognize and identify multiples of 5, helping them understand the concept of multiplication at an early age.
- By visually following the number grid, the student has strengthened their understanding of number patterns and relationships, which is essential for building a strong foundation in mathematics.

For continued development, encourage the student to apply skip counting in real-world scenarios, such as counting groups of objects in fives. Additionally, introduce interactive online games or physical activities that reinforce skip counting by 5s.
