

## Core Skills Analysis

### Geography

- The 12-year-old student learned about location by discussing where different in-game landmarks are located within the Fortnite map.
- Through analyzing the resources available in different areas of the game, the student grasped the concept of human-environment interaction.
- Discussions about the varying climates within the game world helped the student understand the theme of region in geography.
- By exploring how different cultures are represented in the game, the student gained insight into the concept of cultural diffusion.

### Tips

To further enhance your son's understanding of geography through gaming, encourage him to research real-world locations that may have inspired the in-game settings. You could also introduce him to map-making activities that relate to the Fortnite map or challenge him to create his own virtual world with distinct geographical features.
