

Core Skills Analysis

Science

- The 3-year-old student learned about different types of dinosaurs and their habitats, demonstrating an understanding of prehistoric creatures.
- Through creating the dinosaur habitat, the student learned about the importance of environmental factors for animals to thrive, such as food and shelter.
- The activity provided hands-on experience for the student to understand basic concepts of ecosystems and the interdependence of living organisms.
- By working together, the student also learned teamwork and communication skills, essential for collaborative learning and problem-solving.

Tips

For continued development after the dinosaur habitat activity, consider exploring other prehistoric creatures such as mammoths or saber-toothed tigers to broaden the understanding of ancient life forms. Encourage imaginative play by creating scenarios where the dinosaurs interact with each other in their habitat, fostering creativity and storytelling skills. Additionally, incorporate sensory elements like different textures and materials to enhance the sensory experience and stimulate curiosity and exploration.
