

Core Skills Analysis

Physical Education

- Improvement of fine motor skills through manipulating the putty.
- Enhancement of hand-eye coordination while shaping and molding the putty.
- Development of sensory awareness by feeling the texture and consistency of the putty.
- Promotion of gross motor skills through activities like rolling and pounding the putty.

Play

- Encouragement of imaginative play as the student creates different shapes and objects with the putty.
- Facilitation of social skills if the activity is done in a group setting, promoting sharing and turn-taking.
- Stimulation of creativity by allowing the child to experiment with colors and designs in the putty.
- Promotion of cognitive skills through problem-solving when trying to make specific shapes or figures.

Tips

For continued development related to playing with putty, consider introducing themed play sessions where the child can create scenes or stories with the putty. Encourage them to explore mixing colors to create new shades and textures. Provide challenges like creating animals, letters, or numbers to enhance their learning while having fun. Additionally, incorporating music or storytelling during the activity can further stimulate their imagination and engagement.
