

## Core Skills Analysis

### Science

- The 4-year-old student has learned about different animals and their habitats through the various episodes of the Wild Kratts show.
- They have gained knowledge about the characteristics and behaviors of specific animals showcased in the episodes.
- The student has developed an interest in wildlife conservation and the importance of protecting endangered species.
- They have learned about food chains and ecosystems through the exploration of different environments in the show.

### Biology

- The child has enhanced their understanding of animal species and their unique adaptations for survival.
- They have learned about the classification of animals based on their characteristics and habitats.
- Through the show, the student has been introduced to concepts of animal anatomy and physiology.
- They have developed an appreciation for the diversity of life forms on Earth.

### Tips

To further enhance the learning experience from watching Wild Kratts, consider engaging the child in related hands-on activities such as creating their own animal masks or puppet shows based on the show's characters. Encourage them to ask questions about the animals they see and help them research to find answers. Additionally, take nature walks to observe local wildlife and discuss similarities and differences with the creatures featured in the show. By making learning fun and interactive, you can foster a lifelong love for science and biology in the child.
