

Core Skills Analysis

Science

- The 3-year-old student learned about the different types of insects by observing them up close during the activity.
- Through handling insects, the student gained an understanding of the insect life cycle, including how they move and behave.
- The activity provided an opportunity for the student to learn about the importance of insects in the ecosystem and their role in pollination.
- By interacting with insects, the student also developed sensory skills and curiosity about the natural world.

Tips

To further enhance the learning experience related to handling insects, consider incorporating outdoor exploration sessions to observe insects in their natural habitats. Encourage the child to ask questions and explore different types of insects using age-appropriate resources such as picture books and interactive games. Additionally, you can set up a mini garden or bug habitat at home to continue the hands-on learning experience.
