

Core Skills Analysis

Science

- The student learned about the behavior and habits of possums by observing their movements during the game.
- Through the game, the student understood the concept of nocturnal animals and how they adapt to their environment.
- The activity likely sparked curiosity about wildlife and ecosystems, leading to potential further exploration into ecology.
- The student may have grasped the idea of camouflage and how it helps animals like possums blend into their surroundings.

Tips

For continued development, encourage the child to research more about wildlife and different animal species. Take them on outdoor trips to observe nature and different animals in their habitats, fostering a deeper connection to the environment. Encourage them to create their own games or activities based on animals they learn about, enhancing creativity and learning in a fun way.
