

Physical Education

- The child has developed their coordination skills through the fast-paced movements required in gorilla tag.
- Playing with strangers online has improved their social interaction skills, as they learn to communicate and work together with new people.
- The activity has enhanced their cardiovascular endurance, as they engage in active running and chasing during the game.
- Gorilla tag also promotes agility and flexibility, as the child needs to quickly change direction and dodge opponents.

For continued development, the child can explore other online games that promote physical activity and teamwork. They can also try out physical activities offline, such as obstacle courses or team sports, to further enhance their coordination and endurance.
