

Core Skills Analysis

Science

- The student demonstrated an understanding of the stages of the water cycle, including evaporation, condensation, and precipitation.
- By engaging with the activity, the child was able to identify how water moves from one state to another, illustrating this concept through drawing or storytelling.
- The student connected the water cycle to weather patterns, recognizing how different forms of precipitation occur.
- Observations made during the activity allowed the child to understand the importance of the water cycle in maintaining ecosystems.

Tips

To enhance the child's learning experience regarding the water cycle, consider incorporating hands-on experiments like creating a mini water cycle in a bag. Encourage discussions about the impact of weather changes on our environment. Using story-based learning can further help the child relate the concepts to real-world scenarios. Reflecting on how different environments, such as forests and deserts, reflect varied water cycles can also deepen understanding.
