

## Science

- The child learned about the concept of cause and effect as they observed the different actions and reactions in the game.
- They developed an understanding of the human body and its anatomy through the various virtual surgeries and procedures in the game.
- They learned about the importance of hygiene and sterilization as they followed the game's protocols before performing any procedures.
- The child gained knowledge about different medical tools and their uses through the game's interactive virtual environment.

For continued development, encourage the child to explore other science-related games or simulations that provide hands-on experiences and further enhance their understanding of scientific concepts. Additionally, they can engage in real-life experiments or visit science museums to further explore the topics covered in Play gorebox.
