

## Core Skills Analysis

### Art

- Learned the different textures and effects created by using various paint brushes.
- Practiced fine motor skills through brush handling and control during painting.
- Understood the concept of color mixing and layering while applying paint.
- Explored personal creativity by choosing brush types and painting styles.

### Tips

To further develop the student's understanding of painting techniques, encourage experimenting with different brush strokes (e.g., dabbing, sweeping, stippling) and observe the visual effects. Introduce color theory basics by mixing primary colors to create secondary colors, then applying these blends using various brushes. Try creating a themed painting project, such as a nature scene or abstract art, to focus creativity and practice new techniques. Additionally, exploring the history of famous painters known for their brushwork can deepen appreciation and inspire new style explorations.

### Book Recommendations

- [The Dot](#) by Peter H. Reynolds: A story encouraging creativity and trying new art techniques with confidence.
- [Mixed: A Colorful Story](#) by Arree Chung: A beautifully illustrated book about colors and blending, perfect for young artists exploring paint.
- [Brush, Brush, Brush!](#) by Adele Washington: An engaging picture book exploring the joy of using brushes and painting tools.

### Learning Standards

- CCSS.ELA-LITERACY.RI.2.7: Use information gained from illustrations to support understanding of the text (connecting visual art with reading skills).
- CCSS.MATH.CONTENT.2.G.A.1: Recognize and draw shapes having specified attributes, which supports understanding spatial relations in painting.
- National Core Arts Standards: VA:Cr1.1.2a – Use a variety of materials and tools to explore personal interests in art-making.

### Try This Next

- Create a worksheet with different paint brushes to match with stroke patterns, helping to identify brush effects.
- Set up a painting challenge to create an artwork using only three types of brushes and observe how it changes the result.

### Growth Beyond Academics

This activity likely nurtured patience and concentration as the child learned how to control different brushes. It may have fostered pride in creative choices and boosted confidence through self-expression. There is also room for curiosity to grow as the child experiments with new tools and techniques.
