

## Science

- The child learned about different animals and their characteristics.
- The child practiced identifying and labeling different parts of animals, such as the head, body, legs, etc.
- The child developed an understanding of the concept of categorization by sorting animals into groups based on their characteristics.
- The child gained knowledge about the habitats of different animals and how they adapt to their environments.

For continued development, encourage the child to explore more animals and their habitats. They can create their own animal labels and categorize them based on different criteria, such as their diet, size, or unique features. Additionally, provide opportunities for the child to observe animals in real-life settings, such as visiting a zoo or nature reserve.

## Book Recommendations

- [My Animal Book](#) by Rebecca Gerlings: This book introduces various animals and their characteristics through colorful illustrations and simple text, perfect for young readers.
- [The Animal Alphabet](#) by Alex Lluch: This interactive book combines learning the alphabet with discovering different animals, providing an engaging reading experience for preschoolers.
