

## Science

- The child learned about the life cycle of mosquitos.
- They learned how mosquitos are attracted to certain smells or substances.
- The child learned about different methods to prevent mosquito bites.
- They learned about the importance of mosquito control for preventing diseases.

For continued development, the child can explore other insects and their life cycles. They can also investigate different methods of mosquito control and create their own experiments to test their effectiveness. Additionally, they can research and learn about diseases transmitted by mosquitos and ways to protect themselves from those diseases.
