

Math

- Sakina has memorized the multiplication table of 6.
- She can quickly recall the products of multiplying any number by 6.
- Sakina can solve basic multiplication problems involving the number 6.

To further develop Sakina's understanding of multiplication and the table of 6, encourage her to practice applying the knowledge in real-world scenarios. For example, she could calculate the total cost of purchasing 6 items at a given price, or determine how many groups of 6 are needed to distribute a certain number of objects. Engaging in hands-on activities like these will reinforce her understanding of multiplication and make it more practical and meaningful.
