

Math

- The child has learned logical reasoning skills through the process of solving Sudoku puzzles.
- They have practiced critical thinking and problem-solving by analyzing the given numbers and determining the correct placement of digits.
- Sudoku has helped improve the child's number sense and understanding of numerical patterns.
- Through repetition and practice, the child has enhanced their concentration and focus on mathematical tasks.

Continued development can be encouraged by introducing different variations of Sudoku puzzles, such as Sudoku with letters or symbols instead of numbers. This can help the child develop abstract thinking and problem-solving strategies in a fun and creative way. Additionally, challenging the child to create their own Sudoku puzzles can further enhance their understanding of patterns and logical reasoning.
