

## Science

- The child learned about the solar system and the different planets by creating a model of the night sky in the shoebox planetarium.
- They learned about the concept of scale by accurately representing the relative sizes of the planets in their model.
- They gained knowledge about the rotation and revolution of the Earth and how it affects day and night.
- The child also learned about constellations and their significance in navigation and storytelling.

For continued development, encourage the child to research more about the planets in our solar system, including their characteristics and unique features. They can also explore astronomy and learn about different types of stars and galaxies. Additionally, they can experiment with different light sources to understand how light affects the visibility of stars and constellations.

## Book Recommendations

- [The Darkest Dark](#) by Chris Hadfield: A story inspired by the childhood of astronaut Chris Hadfield, which explores the power of imagination and overcoming fear of the dark.
- [The Solar System](#) by Seymour Simon: An informative book that provides in-depth knowledge about the solar system, including planets, moons, and other celestial bodies.
- [Night Sky Atlas](#) by Robin Scagell: A guidebook that helps young readers navigate and explore the night sky, providing information on stars, constellations, and how to identify them.
