

## Science

- The Fifth-grade child learned about the physical features of Canada, such as mountains, rivers, and lakes.
- They learned about the different regions in Canada and the unique ecosystems found in each region.
- The child learned about the wildlife in Canada, including species like moose, bears, and beavers.
- They learned about the impact of climate on Canadian geography, such as the presence of permafrost in the northern parts of the country.

## Social Studies

- The child learned about the provinces and territories of Canada and their respective capitals.
- They learned about the history and culture of Canada, including the Indigenous peoples and their contributions to the country.
- The Fifth-grade child learned about the Canadian government and its structure, including the roles of the Prime Minister and the Governor General.
- They also learned about the economy of Canada, including its major industries like forestry, mining, and oil production.

To further develop their knowledge of Canadian geography, the Fifth-grade child can explore interactive online maps or use apps that provide virtual tours of different regions in Canada. They can also engage in hands-on activities such as creating 3D models of Canadian landmarks or conducting research projects on specific provinces or territories. Encouraging them to read books related to Canadian geography will also enhance their understanding and appreciation of the subject.
