

History

- The child learned about the history of Mammoth Yellowstone, including its formation and significance as a National Park.
- They learned about the Native American tribes that have lived in the area for thousands of years and their cultural significance.
- The child learned about famous historical figures who have explored or contributed to the understanding of Mammoth Yellowstone.
- They gained an understanding of the historical timeline of events that have shaped the park's development and conservation efforts.

Science

- The child learned about the geology of Mammoth Yellowstone, including the formation of geysers, hot springs, and other thermal features.
- They studied the diverse ecosystem of the park, including the different plant and animal species that inhabit the area.
- They gained knowledge about the geological processes that have shaped the landscape over millions of years.
- The child learned about the importance of conservation and the role of humans in preserving the natural resources of the park.

Social Studies

- The child gained an appreciation for the cultural diversity of the Native American tribes that have inhabited the area.
- They learned about the impact of tourism on local communities and economies.
- The child learned about the importance of responsible tourism and respecting the rights and traditions of the local people.
- They gained an understanding of the significance of Mammoth Yellowstone as a national treasure and its impact on the United States.

Continued development related to the activity could involve encouraging the child to create a scrapbook or digital presentation about their visit to Mammoth Yellowstone. They can include photographs, drawings, and written descriptions of the things they learned and experienced during the trip. Additionally, the child could be encouraged to research and write a short report about a specific aspect of the park, such as a particular geyser or animal species.
