

Science

- The child learned about geodes and their formation.
- The child learned how to identify different types of geodes based on their external appearance.
- The child learned how to crack open a geode to reveal its hidden crystals.
- The child learned about the different types of minerals that can be found inside geodes.

A creative way for continued development related to finding geodes is to set up a geode exploration station at home. Provide the child with different types of geodes and let them practice identifying and cracking them open. They can also research more about geodes and minerals to expand their knowledge.
