

Physical Education

- The child develops fine motor skills by holding and manipulating a cloth or sponge to wipe the table.
- They practice gross motor skills by bending and reaching to clean different areas of the table.
- The activity promotes hand-eye coordination as the child aims to wipe specific spots on the table.
- Wiping the table is a physical activity that engages the child's muscles, promoting overall physical fitness.

For continued development, encourage the child to vary the wiping motion by using circular or zigzag patterns. This can help enhance their fine motor skills and hand-eye coordination. Additionally, you can incorporate counting or sorting objects while wiping to add a cognitive element to the activity.
