

Science

- The child has learned to identify and label different body parts, such as the head, arms, legs, and hands.
- They have learned the basic function of each body part, for example, the head is used for thinking and the hands are used for grabbing objects.
- The child has also learned the importance of taking care of their body parts and keeping them clean and healthy.
- They have gained an understanding of the external anatomy of the human body and how the different parts work together.

For continued development related to labeling body parts, you can encourage the child to explore more about the human body. They can learn about the internal organs and their functions, as well as the skeletal and muscular systems. You can also provide them with opportunities to engage in hands-on activities, such as creating a life-size body outline and labeling the different parts. Encourage them to ask questions and be curious about the human body.

Book Recommendations

- [My Amazing Body: A First Look at Health and Fitness](#) by Pat Thomas: This book introduces young children to the importance of taking care of their bodies and provides information about different body parts and their functions.
