

## Math

- The child has learned to subtract and add items to make a sum of 10.
- They have practiced counting backwards from 10 and counting up to 10.
- The child has developed an understanding of number bonds up to 10.
- They have gained fluency in basic addition and subtraction within 10.

To further develop their skills in subtracting and adding items to 10, you can encourage the child to use real-life objects for practical application, such as counting and subtracting items during grocery shopping or counting and adding items while playing with toys. You can also introduce online interactive games or apps that focus on addition and subtraction within 10 to make learning more enjoyable and engaging.
