

Art

- The child learned about different colors and how they can be mixed together to create new colors.
- The child explored different textures by painting with various materials such as sponges, brushes, and their own hands.
- The child practiced fine motor skills while holding and manipulating the paintbrush.
- The child expressed their creativity and imagination by creating their own unique artwork.

English Language Arts

- The child developed vocabulary by discussing and describing the wobbly objects they encountered during the activity.
- The child practiced listening skills by following instructions and participating in group discussions about wobbly objects.
- The child engaged in storytelling by imagining the adventures and mishaps of the wobbly objects.
- The child practiced writing by creating a story or journal entry about their own wobbly life.

History

- The child learned about the invention and evolution of different types of wheels and the impact they have had on transportation and technology.
- The child explored how wobbly objects have been used throughout history, such as the use of wobbly toys in ancient civilizations.
- The child learned about famous inventors and their contributions to the development of wobbly objects.
- The child gained an understanding of how wobbly objects have changed over time and become a part of everyday life.

Math

- The child practiced counting by counting the number of wobbly objects they encountered during the activity.
- The child explored concepts of balance and stability by experimenting with different weights and sizes of wobbly objects.
- The child practiced measuring by comparing the heights or lengths of different wobbly objects.
- The child learned about shapes by identifying and categorizing the different shapes of wobbly objects.

Physical Education

- The child improved their balance and coordination by attempting to balance on wobbly objects.
- The child practiced gross motor skills by walking, running, or jumping on wobbly surfaces.
- The child engaged in physical activity and exercise while exploring and interacting with wobbly objects.
- The child learned about body awareness and control by adjusting their movements to maintain stability on wobbly surfaces.

Science

- The child learned about the concept of stability and how it relates to wobbly objects.
- The child explored the concept of gravity and how it affects the movement and balance of wobbly objects.
- The child experimented with cause and effect by observing how different actions or forces can

affect the wobbliness of objects.

- The child learned about materials and their properties, such as how different materials can affect the wobbliness of objects.

Social Studies

- The child learned about the diversity of cultures and how wobbly objects may be used differently in different cultures.
- The child explored the concept of teamwork and cooperation by engaging in group activities with wobbly objects.
- The child learned about the concept of responsibility by taking care of and handling the wobbly objects properly.
- The child gained an understanding of the importance of play and leisure activities in different societies.

Continue developing the child's creativity and imagination by encouraging them to create their own wobbly objects using recycled materials or clay. They can experiment with different shapes, sizes, and levels of wobbliness. Encourage them to think about the purpose and function of their wobbly creations and how they can be used in everyday life or as toys. Provide them with opportunities to share and showcase their wobbly objects with others, fostering their communication and presentation skills.
