

## Math

- The child has learned how to use logic and deductive reasoning to solve puzzles.
- They have strengthened their critical thinking skills by analyzing the given numbers and determining the correct placement.
- The activity has helped them practice basic arithmetic operations, such as addition, subtraction, and multiplication.
- They have developed their problem-solving skills through trial and error and finding the correct solution.

Continued development related to the activity can include exploring other number puzzle games like Kakuro or KenKen to further enhance logical and mathematical thinking. Additionally, the child can create their own Sudoku puzzles for their friends or family members to solve, fostering creativity and problem-solving abilities.
