

## Science

- The Third-grade child learned about different types of snakes found in the Shoalhaven region.
- They learned about the behaviors and habitats of snakes.
- They learned about the role of snake catchers in safely removing snakes from residential areas.
- They learned about the importance of snake awareness and safety measures.

## Social Studies

- The Third-grade child learned about the Shoalhaven region and its geography.
- They learned about the local communities and the services provided, such as snake catching.
- They learned about the importance of environmental conservation and preserving the natural habitats of snakes.
- They learned about the cultural significance of snakes in the Aboriginal community.

Continued development related to this activity can include encouraging the students to research more about the different snake species found in their own region. They can create posters or presentations about snake safety and awareness to share with their classmates. Additionally, organizing a visit from a local snake catcher or inviting them for an online session can provide further insights into their work and allow students to ask questions. This can deepen their understanding of the subject and foster a sense of curiosity and responsibility towards the local wildlife.

## Book Recommendations

- [The Snake Scientist](#) by Sy Montgomery: This book explores the life and work of a snake scientist, providing valuable information about different snake species and their habitats.
- [Snakes Are Hunters](#) by Patricia Lauber: This book delves into the hunting strategies and behaviors of snakes, offering an engaging and informative read for young readers.
- [The Shoalhaven Snakes](#) by Emma Mactaggart: This fictional story takes place in the Shoalhaven region and follows a group of kids encountering various snakes. It combines adventure and snake education seamlessly.
