

## Math

- The child learned the concept of factorial, which involves multiplying a given number by all the positive integers less than it.
- The child practiced calculating factorials of different numbers.
- They learned how to use the exclamation mark notation (!) to represent factorials.
- The child understood that the factorial of 0 is equal to 1.

Continued development in Math can be encouraged by introducing the child to more complex factorial problems, such as finding the factorial of larger numbers or solving factorial equations. Additionally, exploring real-life applications of factorials, such as in probability or permutations and combinations, can deepen their understanding of the concept.
