

## Science

- The child learned about different animals and their habitats.
- The child learned about the different states of matter - solid, liquid, and gas.
- The child learned about the water cycle and how water evaporates, condenses, and precipitates.
- The child learned about the different types of weather and how they are formed.

For continued development, encourage the child to explore nature and observe different animals in their natural habitats. They can also conduct simple experiments at home to further understand the states of matter and the water cycle. Encourage them to keep a weather journal and observe and record the weather conditions each day.

## Book Recommendations

- [National Geographic Kids: Animals](#) by National Geographic Kids: A colorful and informative book that introduces children to a variety of animals and their habitats.
