

Science

- Understanding probability and chance by strategizing and making decisions during the game.
- Developing critical thinking skills by analyzing the effects of different card plays on the overall game outcome.
- Exploring concepts of supply and demand by negotiating and trading properties with other players.
- Learning about the concept of luck and random events by experiencing the element of chance in drawing cards.

Continued development related to the Monopoly Deal Card game can be fostered by encouraging students to explore real-life examples of probability and chance. For example, they can conduct experiments and record results to determine the likelihood of certain events happening, such as flipping a coin or rolling a dice. Additionally, students can research the history of Monopoly and its impact on economics, which will deepen their understanding of supply and demand concepts.
