

Physical Education

- The child has learned balance and coordination skills through the activity of trampolining.
- They have developed cardiovascular fitness and endurance by engaging in continuous jumping and bouncing on the trampoline.
- Trampolining has also helped improve the child's flexibility as they perform various jumps and movements on the trampoline surface.
- Additionally, the child has learned the importance of following safety rules and regulations while using the trampoline, promoting their understanding of safety in physical activities.

For continued development, encourage the child to explore different trampoline routines, such as incorporating various jumps and flips. They can also participate in trampoline classes or workshops to learn advanced techniques and skills. Additionally, incorporating strength and conditioning exercises off the trampoline can further enhance their performance.
