

Math

- The child has learned about division by understanding that 9 divided by 6 equals 1.5.
- They have practiced solving simple division problems.
- They have gained an understanding of fractions, as 1.5 is also expressed as $\frac{3}{2}$.
- This activity has reinforced the concept of equivalent fractions, as $\frac{9}{6}$ is equivalent to $\frac{3}{2}$ or 1.5.

For continued development, encourage the child to practice more division problems with different numbers. Introduce the concept of remainders in division to expand their understanding. Use visual aids such as fraction bars or manipulatives to help them visualize the concept of fractions and division.

Book Recommendations

- [The Doorbell Rang](#) by Pat Hutchins: This book introduces the concept of division and sharing in a fun, relatable story for children.
- [The Lemonade War](#) by Jacqueline Davies: This book uses a lemonade stand and the concept of dividing profits to teach children about division and Math in a real-world context.
- [Sideways Arithmetic from Wayside School](#) by Louis Sachar: This book contains wacky and fun Math stories that can engage children and help them understand Math concepts, including division.
