

Science

- The child has learned about the anatomy and structure of insects through observing them under a microscope.
- They have gained an understanding of the life cycle of insects, including the stages of metamorphosis.
- They have learned about the importance of insects in various ecosystems and their role in pollination and decomposition.

For continued development, encourage the child to conduct further research on specific types of insects, their behaviors, and adaptations. They could also explore the impact of environmental changes on insect populations and ecosystems.
