

Physical Education

- The child has improved their hand-eye coordination through dressing and undressing the Barbie dolls and engaging in pretend play activities.
- Playing with Barbie dolls has helped the student develop gross motor skills like walking, running, and jumping as they have demonstrated these movements with the dolls during play.
- The activity has enhanced the child's balance and spatial awareness as they have manipulated the dolls and adjusted their positions during imaginative play scenarios.

For continued development, encourage the child to create obstacle courses for their Barbie dolls, incorporating movements and activities that promote physical activity and coordination. Additionally, you can introduce dance parties with the dolls to encourage gross motor skill development and enhance their sense of rhythm and movement.
