

Create a fun coloring page that serves as a cheat sheet for percentages I wanted to say the following: here's what I want you to know about percentages. Percentages are part of a whole percentages can be shown as a fraction, a decimal or the percentage itself. When you have a fraction, the denominator is the whole and the numerator is the part $\frac{1}{2}$ is equal to 0.5 is equal to 50% if you know the amount of the whole and the part that you have, you can find the percentage by creating a fraction, dividing the fraction into a decimal and then converting the decimal to a percent. / Coloring Pages / LearningCorner.co
