

## Why Do Eagles Nest on Cliffs?

Eagles often build their nests high up on cliffs because it keeps them and their eggs safe. Here are a few reasons why cliffs are perfect for eagle nests:

- **Safety from Predators:** Being high on a cliff means that animals like foxes or bears can't easily reach the nest and harm the babies or eggs.
- **Good View:** Eagles have sharp eyes and from a cliff, they can see far, spotting food or danger easily.
- **Strong Support:** Cliffs provide a sturdy place for big nests. Eagles build large nests called 'eyries' which need strong places to stay safe during wind or storms.
- **Quiet and Peaceful:** Cliffs are often quiet places away from busy areas where eagles can raise their chicks peacefully.

So, cliffs are like eagle's safe homes high up in the sky!
