

To round the number **9.43** to the nearest tenth, follow these steps:

1. **Identify the digit in the tenths place:** In 9.43, the tenths place is the first digit after the decimal point, which is **4**.
2. **Look at the digit to the right (the hundredths place):** This is the next digit after the tenths place, which is **3**.
3. **Decide whether to round up or down:** If the hundredths digit is 5 or greater, increase the tenths digit by 1. If it is less than 5, keep the tenths digit the same.
4. Since 3 is less than 5, we keep the tenths digit as **4**.
5. **Write the rounded number:** The digits after the tenths place become zero or are dropped, so the rounded number is **9.4**.

Final Answer: 9.43 rounded to the nearest tenth is **9.4**.
