

Alright, young mathematician, get ready for a fun explanation on how to write 40 million as a number! First, let's understand what 'million' means. In simple terms, one million is equal to 1,000,000, which is a 1 followed by six zeros.

Now, let's think about what 40 million means. It's like saying you have forty 1,000,000s. Isn't that a lot? So, if you know that one million is 1,000,000, you just need to multiply it by 40, because you have 40 of these millions.

Let's break it down step-by-step. Take the number 40. When we say '40 million,' we are basically saying '40 times 1,000,000.' If we write it out, it looks like this:

$$40 \times 1,000,000 = 40,000,000$$

So, 40 million written as a number is 40,000,000. You have a 4 followed by seven zeros! Easy peasy, lemon squeezy!

The more you practice writing big numbers, the better you'll get at it. Imagine having 40 million candies - that sure would be sweet! Remember, it all starts with understanding the smaller numbers and building up. Keep practicing, and soon you'll be a number whiz!
