

When firefighters get a call, it means someone needs help, usually because there is a fire or an emergency. Here's what happens, step by step:

1. **The Call Comes In:** It usually starts when someone dials 911 to report an emergency, like a fire. This call goes to dispatchers who take the information about the situation.
2. **Dispatch Alerts the Firefighters:** The dispatchers quickly share the details with the firefighters at the station. They let them know where the emergency is and what it involves.
3. **Firefighters Get Ready:** As soon as the firefighters receive the alert, they jump into action! They quickly put on their protective gear, which includes helmets, jackets, and boots, to keep them safe.
4. **Get in the Fire Truck:** The firefighters hop into their fire truck, which is specially designed for fighting fires. The truck also carries hoses, water, and other important tools!
5. **Drive to the Location:** The fire truck races to the scene with lights flashing and sirens blaring. This helps clear the way and lets everyone know they are on their way to help.
6. **Assess the Situation:** Once they arrive, the firefighters quickly look around to see what is happening and if everyone is safe. They gather information to understand the best way to help.
7. **Act Fast:** Depending on what they find, firefighters will then start putting out the fire if there is one or help people in need. They work as a team, each having a specific role to make things go smoothly.
8. **Finish Up:** Once everything is safe, they pack up their equipment and make sure the area is clear. They may also talk to people involved to help prevent future emergencies.

This is how firefighters respond when they get a call! They work really hard to keep people safe and respond as quickly as possible.
