

Short answer: call it an "**animal sound button**" or a "**sound effects button**". Both are clear and easy to understand for kids.

Step-by-step help for an 8-year-old who wants to name the button:

- **Pick a simple name** — examples: *Animal Sound Button*, *Animal Noises*, *Press for Animal Sounds*, *Zoo Sounds*, or *Mixed Animal Sounds*.
- **Show what it does** — add a tiny picture of an animal or a speaker icon so readers know it plays sounds.
- **Keep the label short** — one short phrase like "Press me: Animal Sounds" is best so young readers can read it quickly.
- **Say there's no music** if you want to be extra clear: write "Animal Sounds (no music)" or "Sound Effects Only."

Technical words parents or makers use: *sound button*, *sound chip*, or *sound module*. But for a child-friendly label, use one of the short names above.

Quick examples you can put on the book:

- Press me: Animal Sounds
- Animal Noises (No Music)
- Zoo Sounds — Press Button

That should make the button clear and fun for kids!
