

How Firefighters Work

Hi there! Do you know what firefighters do? They are special heroes who help us when there are fires or when people need help. Let's learn how they work, step by step!

1. Getting Ready

Firefighters have a big job, so they wear special clothes called gear. This gear protects them from hot flames and smoke. They also wear helmets to keep their heads safe.

2. Driving to the Fire

When someone calls for help, firefighters jump into their shiny fire trucks. The truck has a big bell and lights that flash. They drive very fast so they can get to the fire quickly!

3. Putting Out the Fire

When they reach the fire, they grab a long hose that sprays out water. They aim the hose at the fire to make it go away. Firefighters work together like a team to make sure everyone is safe.

4. Helping People

Sometimes, fires can make people scared or hurt. Firefighters also help rescue people and pets if they are in danger. They are brave and make sure everyone is okay.

5. Going Home

After the fire is out and everyone is safe, firefighters go back to their fire station. They clean their gear and get ready for the next call. They always stay ready to help!

Firefighters are true heroes who help keep us safe! Next time you see a fire truck, you can wave and thank them for their hard work!
