

Hey there! Do you know what an excavator is? It's a big machine that looks like a giant robot! It helps to dig holes in the ground and move heavy things around.

Imagine you have a big spoon and you want to dig in the sand to make a big sandcastle. An excavator has a big arm with a scoop on the end, just like your spoon, but much bigger! It can dig deep into the dirt and lift it up high.

Excavators can be different colors, like yellow and green, and they make a loud noise when they are working. Sometimes, when people need to build houses or roads, they use an excavator to help do the hard work.

So, next time you see a big machine on a construction site, you can say, 'Look! That's an excavator! It's digging!' Isn't that cool?
