

Alright, little buddy! When we talk about ice cream vans, we are talking about special vehicles that bring us yummy ice cream. Let me explain it step by step:

1. **A big freezer:** Imagine a big box that keeps things really cold, like a big ice cube. That's where lots of ice cream is stored! This big freezer helps keep the ice cream frozen so it stays yummy.
2. **Wrapped ice cream:** The ice cream in the freezer usually comes in special wrappers. These wrappers keep the ice cream safe and fresh, like wrapping a present. When you go to the ice cream van, you can choose the flavor you want, and then you unwrap it to eat!
3. **Machines that make ice cream:** Some ice cream vans are extra special because they have machines inside them. These machines can make ice cream right there on the spot! They can mix different flavors together, like chocolate and strawberry, to create lots of delicious tastes.

So, next time you see an ice cream van, remember there's a big freezer with wrapped ice cream and maybe a magical machine that makes even more yummy flavors!
