

The main part of an ice cream van is a large **freezer**. A freezer is like a big box that keeps things very cold, so food doesn't spoil. Inside this freezer, there are lots of **wrapped ice cream** treats. Each ice cream is usually wrapped in paper or plastic to keep it fresh and clean until you're ready to eat it!

Some ice cream vans also have a special machine that can **make ice cream** on the spot! This means they can mix different ingredients together to create tasty flavors. For example, you can find ice cream in flavors like **strawberry** or even the fun flavor **bubblegum**, which tastes sweet and delicious!

So next time you see an ice cream van, remember that it has a big freezer full of cold treats and maybe even a cool machine that whips up ice cream in awesome flavors just for you!
