

A dumper truck is a big, strong truck that carries heavy stuff like dirt, rocks, or sand. What makes it unique is that it can lift its back part up!

When the truck lifts its back, all the heavy things inside can fall out. This helps workers easily move materials to build things like houses, roads, or schools. Imagine if you have a big toy box, and when you lift it, all your toys come out! That's how a dumper truck works, but it carries much bigger things!

So, dumper trucks are special because of their big size and their ability to dump out the heavy things they carry!
