

Let's Learn About Addition and Subtraction!

Hi Fynn! Let's pretend we have some yummy apples. **First, let's talk about addition.**

If you have 2 apples, and I give you 1 more apple, how many apples do you have now? (Count them out loud together: $2 + 1 = 3$!) So, addition means you get **more**.

Now, let's talk about **subtraction**.

If you have 3 apples and you eat 1 apple, how many apples do you have left? (Count them again: $3 - 1 = 2$!) So, subtraction means you have **less**.

So remember: **addition** is about adding more and getting more apples, while **subtraction** is about taking away and having fewer apples!
