

A drum set is like a big instrument made up of different parts that make cool sounds!

First, there are the **drums**. When you hit a drum with a stick, it goes *thump!* or *boom!*. Each drum can make a different sound. For example, a big drum called a **bass drum** sounds very deep, like a *big thump*. A smaller drum called a **snare drum** makes a sharp sound like *snap!*.

Next, we have the **cymbals**. When you hit a cymbal, it makes a loud *crash!*. Sometimes, you can make a softer sound with them, like a *ping* when you hit them gently.

So, when someone plays a drum set, they can make lots of different sounds like *thump*, *boom*, *snap*, and *crash!* Each sound is super fun and can help make music!
