

What is a Guitar?

A guitar is a musical instrument that has **six strings**. These strings are what makes the lovely sounds when we play the guitar.

How Does It Work?

- 1. Two Hands:** A musician uses **both hands** to play the guitar. One hand is for picking the strings, and the other is for pressing down on them.
- 2. Picking the Strings:** With one hand, they **pluck** or **strum** the strings. This makes the strings vibrate and create music!
- 3. Pressing the Strings:** With the other hand, they **press down** on the strings along a long part called the neck of the guitar. This changes the sound of the string and makes different notes.

Why is it Fun?

Using a guitar is fun because it lets the musician make all kinds of pretty sounds and songs!
