

A harmonica is a special little music instrument that looks like a bar-shaped box. It has small holes on one side. When you want to play music, you can **blow air into those holes** or **pull air out** of them. Each hole makes a different sound, like notes in a song.

Think of it like this: imagine you are blowing bubbles! When you blow air into a harmonica, it makes beautiful music instead of bubbles. And when you suck air in, it plays even more sounds. This is how you can create fun tunes with a harmonica, and it's super easy to learn!
