

Hi there! Let's talk about **nature**! Nature is everything around us that is not made by people. It includes things like **trees, flowers, animals**, and even the **sky** and **water**.

Imagine when you go outside to play. You might see **birds** flying in the sky, feel the **grass** under your feet, and hear the **wind** blowing. That is **nature**! It is all the beautiful things that are part of our world.

Nature can be big, like a giant **mountain**, or small, like a tiny **ant**. Every part of nature plays a special role. Just like how you have a special job at home, like picking up your toys, nature has its own jobs too, like helping plants grow or making sure animals have a place to live.

Isn't nature amazing? It's like a big treasure full of wonderful things to see and explore!
