

Okay, little one! Let's think about a big, colorful picture, like a rainbow or a funny animal. Now, imagine if we took that picture and cut it into little pieces, like jigsaw puzzle pieces. Those little pieces are what we call 'fragments.'

When we look at these pieces, we can try to find out which ones belong to the whole picture. For example, if we see a piece with red and blue colors, we can think, 'Hey, that might be part of the rainbow!' But if we find a piece that is all yellow, we might wonder if it's part of a sun or maybe a yellow bird!

So, to find out which fragments are from the picture, we look closely at each piece and try to remember what the big picture looks like. It's like a fun game of matching!

Do you want to play this matching game with some pictures? Let's do it together!
